- Thwart unauthorized TCP/IP connections
- Reveal hidden windows that may be running a hacker's code
- Shred multiple files – including pictures – at the touch of a button
- Small footprint for portability – easy to install on a USB drive
- Free one-on-one technical support by email
- Free access to exclusive members-only website and additional downloads

X-Cleaner Deluxe provides comprehensive protection against spyware, adware, and other privacy invaders for security-conscious computer users. Running alongside your firewall and anti-virus software, X-Cleaner Deluxe gives you an extra layer of armor to protect your privacy and security whenever you're online.

Why Anti-virus and Firewalls are Not Enough

A virus scanner will protect you against virus- and worm-infected files. A firewall will protect you against hacking attempts coming from the Internet. But neither can protect against someone trying to hijack your confidential information by installing spyware or a keylogger, or steal secrets by tracking file remnants left on your hard drive.

Additionally, spyware behaves very differently from viruses. Viruses can activate from anywhere on the system, but spyware needs to hook into the heart of Windows – usually by adding unauthorized information to the registry. Cleaning the registry is a specialized task, requiring specialized tools – it's not something the average user should attempt to do manually.

What Can Spyware Do?

Spyware is an umbrella term for any software program that installs itself on your PC without your knowledge or authorization, and then proceeds to snoop around your PC, reading your files and tracking your online behavior. By its very nature, it is stealthy and tries to evade detection.

Spyware can trap everything you type. Passwords, credit card and bank account numbers and social security numbers can be used to steal your identity and set up fraudulent transactions.

Correspondence that's meant only for the addressee can be used to damage your reputation and business or personal relationships. Spyware can track what you do online, tie that in with your personally identifiable information, and forward the results to spammers and other unethical marketers, making you a target for unwanted email, pop-up ads, and other unnecessary web content.

How Does X-Cleaner Deluxe Help?

X-Cleaner Deluxe, when used in conjunction with your anti-virus and firewall software, will give you powerful tools to protect your online privacy and prevent abuse of your confidential information:

- Detect and remove known spyware and keyloggers
- Block adware from activating on your PC
- Unlimited free anti-spyware updates for a year
- Vaccinate your system against rogue installers
- Thwart unauthorized TCP/IP connections
- Reveal hidden windows that may be running a hacker's code
- Erase all traces of which sites you've visited

- Shred multiple files – including pictures – at the touch of a button
- Free one-on-one email technical support

Backed by Industry-Leading Research

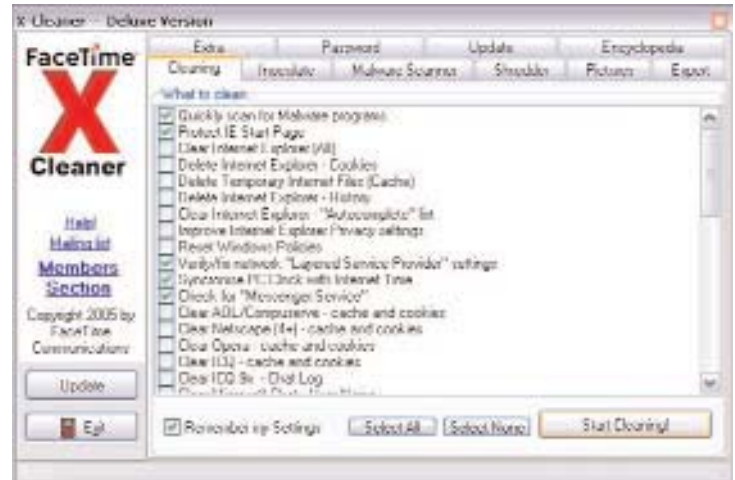

The spyware detection database used by X-Cleaner Deluxe is maintained by FaceTime Security Labs, the industry's largest research team dedicated to the collection, analysis, understanding, and management of threats generated through the intentional or accidental use of spyware, adware, P2P file sharing networks, IRC, and instant messaging. With facilities in the United States (West Virginia and California), the United Kingdom, and India, FaceTime Security Labs employs dozens of dedicated researchers and supports a global community of concerned individuals who contribute their own experiences to the research effort.

FaceTime Security Labs publishes detailed information about known threats that enable the blocking of spyware distribution sites as well as developing the patent-pending inoculation and targeted remediation capabilities that keep FaceTime's customers spyware-free.

FaceTime Security Labs also maintains the popular SpywareGuide.com site, the leading public reference site for spyware research, providing details about spyware and adware applications, their known variants, and their behavior through an extensive and continually updated database. The site also offers a wealth of information to enable both IT professionals and home computer users to educate themselves on the problems and risks associated with spyware.

System Requirements

X-Cleaner runs on Windows 98, Me, NT, and XP, and is compatible with most versions of Internet Explorer, Netscape, Opera, and AOL browsers.
