

MX LogicSM Web Defense Service-Content Control

Between 30% and 40% of Internet browsing is non-job related.

IDC RESEARCH

More than 55% of PCs are infected with some form of spyware.

SANS INSTITUTE

While virtually all businesses rely on the Internet for critical business data, communications, competitive research, and industry news, this critical tool can drain productivity and expose the business to risk and liability. With the MX LogicSM Web Defense Service – Content Control, businesses can now easily and effectively monitor and manage unproductive use of the Internet by employees.

Offering far more than just website supervision, Content Control was developed to help businesses have greater control over and insight into employee Web behavior in order to maintain healthier networks and safer employees.

WASTED TIME, TAINTED SITES

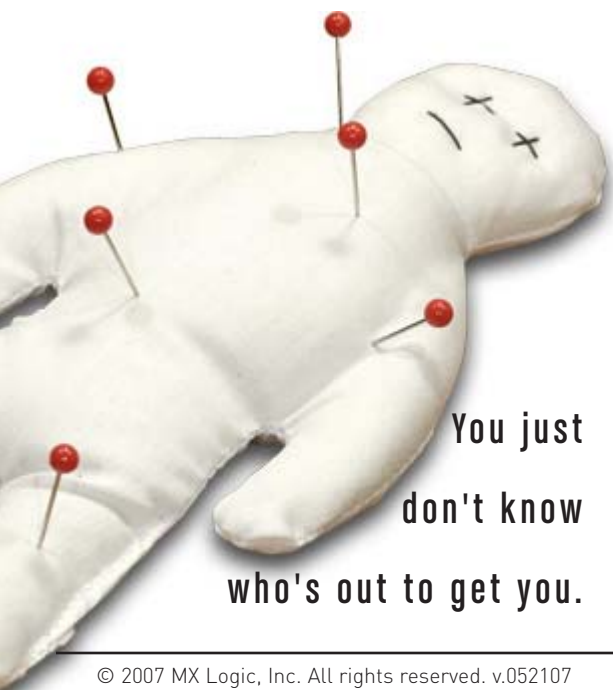

Every minute your employees spend surfing non-work related sites on the Internet is a minute taken away from your business, and a minute closer to being infected from Web-based threats. The landscape is shifting and risks now take many forms.

- 70 percent of all Internet porn traffic occurs during the 9 to 5 work day
- Between 30 and 40 percent of Internet browsing is non-job related
- In the first quarter of 2006, the total number of identified sites hosting spyware was 427,000

CONTENT CONTROL DESIGNED TO REDUCE RISK AND LIABILITY

An integral part of our fully-managed MX Logic Web Defense Service, Content Control employs extensive URL filtering technology to help you control employee access to specified Web content. With our Web defense platform, your business can effectively:

- Increase employee productivity
- Reduce network congestion
- Free up bandwidth by limiting access to bandwidth-intensive applications
- Limit risk of legal liability
- Ease burden on IT staff through flexible, scalable, continually-updated service

You just
don't know
who's out to get you.

EASIEST, MOST EFFECTIVE WAY TO MINIMIZE EXPOSURE, ELIMINATE WASTED TIME

Content Control is easy to activate, requires minimal administration and is extremely user-friendly – making it an invaluable Web security tool. Content Control offers IP- and user-level authentication, enabling you to pinpoint abuse, and set policies depending on the needs of specific groups. Other benefits include:

- **Rapid service activation**
- **Convenient monthly contract terms**
- **No hardware or software to integrate**
- **Minimal setup requirements**
- **Instant protection upon redirecting your Web traffic through MX Logic**
- **Effortless policy-setting including group policy management**

SERVICES TO KEEP THE SMALL BUSINESS IN BUSINESS

The benefits of using a managed Web security service are obvious. Web content can be dangerous and, in some cases, debilitating to any-sized business. As a comprehensive managed service, Content Control offers:

- **URL filtering organized in more than 50 categories**
- **Limits access to sites not previously categorized**
- **Safe Search which limits access to prohibited content via search engine results**
- **Control over streaming media access and peer-to-peer media sharing**
- **Easy, convenient administration through the MX Control ConsoleSM**
- **Content, traffic and usage reports**
- **Convenient training classes and Online Help**
- **24x7 Customer Support**

For total network protection using a layered strategy, businesses can combine our Content Control with the MX Logic Web Defense – Threat Control. Find out how you can leave the threat management to us and enjoy a safer, more secure network and business environment by calling 1.877.MXLOGIC or visiting us at www.mxlogic.com.

CONTENT CONTROL
