

NetVault: Backup

StoreVault Edition

FAST FACTS

- *Advanced SAN/NAS Support*
- *Comprehensive NDMP Support*
- *Comprehensive Media Management*
- *Direct Access Restore*
- *Disaster Recovery*
- *Disk-to-Disk Backup*
- *Dynamic Device Sharing*
- *Event Notification*
- *Extensive Platform Support*
- *GbE Device Support*
- *High Performance Data Movers*
- *iSCSI and Fiber Channel Support*
- *Load Balancing*
- *Media Data Copy*
- *Open File Protection*
- *Snapshot Management*

NetVault: Backup StoreVault Edition's graphical user interface simplifies the management of StoreVault backups

Advanced Data Protection for StoreVault Storage Appliances

From the experts in open systems data recovery, BakBone Software's NetVault: Backup delivers enhanced data protection and enterprise-class functionality that scales to meet the demands of any sized environment. NetVault: Backup's flexible, modular architecture delivers proven reliability and high performance, with a unique combination of features designed to meet current and future data protection needs. Whether you are managing a few servers or a multi-site networked storage environment, there is a NetVault: Backup package designed to fit your needs.

Recognizing the need for ease of use and ease of deployment, BakBone's NetVault: Backup StoreVault Edition has been designed specifically for StoreVault environments. Cost-effective and scalable, NetVault: Backup StoreVault Edition ships complete with full NDMP support, and a rich array of Snapshot Management, Application Plugin and expansion add-ons.

KEY BENEFITS

Increased Automation

NetVault: Backup's event notification enhancements and policy based job management features are designed to provide increased automation, especially when deployed across heterogeneous storage networks. NetVault: Backup enables administrators to define, manage and monitor jobs from remote clients, while the flexible notification feature ensures business continuance with the ability to define event contexts and triggers, tailoring Net Vault: Backup to meet your unique requirements.

Enhanced Administrator Productivity

Policy based job management and NetVault: Backup's enhanced reporting capabilities simplify maintenance of your data protection strategies. Many activities such as job definition and event notification can be defined and modified at a group level, making administrative tasks quicker and easier.

Rapid Deployment

NetVault: Backup's automated installation and device configuration features make it easy to add, manage or re-deploy distributed data management components throughout an ever growing enterprise storage environment. With our Modular Architecture you can license only those components you need today, while easily expanding the system as your storage environment or performance requirements grow.

Lower Total Cost of Ownership

By dramatically simplifying implementation and networked storage administration, NetVault: Backup ensures improved data availability while reducing associated labor costs. NetVault: Backup can significantly lower your TCO and provide a return on your initial software investment in as little as six to nine months.

MAJOR FEATURES

Disk-to-Disk-to-Tape

Providing a structured backup to disk, NetVault: Backup's Disk-to-Disk operates and functions just like a physical tape library. Administrators can take advantage of the high performance, low cost attributes of disk for rapid backups and restores in data intensive environments. With or without the aid of a physical tape library, an administrator can quickly allocate disk space to create a virtual tape library for backup. If needed, multiple network clients can be backed up simultaneously to a virtual tape library. Backups can then be migrated or duplicated to or from a virtual library to a physical tape library for off-site storage.

Comprehensive NDMP Support

Providing NDMP v2, 3 and 4 support, the NetVault: Backup NDMP Plugin Module enables efficient backup and recovery of StoreVault appliances, leveraging data transfer over the network while maintaining centralized backup administration. This includes support for all five NDMP data transport models, ensuring data reliability and configuration flexibility in any environment. It also offers advanced features, such as Browseable Volume and Direct Access Restore (DAR) support, which lets you quickly find exactly what must be restored.

SYSTEM REQUIREMENTS

NetVault 7.4.5 or higher

NDMP Plugin v6.304 or later

To use Snapshot Manager Plugin Module, NetApp SnapRestore software is required

Data ONTAP StoreVault Edition 7.0.3S4 or later

SUPPORTED LIBRARIES AND PLATFORMS

DEVICES AND LIBRARIES

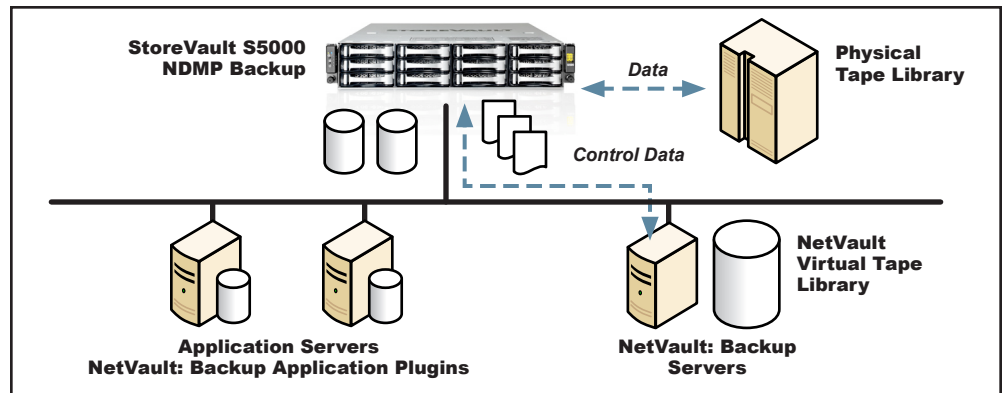

For a complete listing, please check the [NetVault Supported Libraries and NetVault Supported Drives matrices](#) available at www.bakbone.com/support/product_documentation/default.asp.

SERVER AND CLIENT PLATFORMS

Most Linux Platforms, Windows 2000, Windows Server 2003, Windows XP

CLIENT ONLY PLATFORMS

FreeBSD, HP-UX, IBM AIX, Mac OS X, Solaris (SPARC), Solaris (x86)

NDMP Backup with StoreVault and NetVault: Backup NDMP Application Plugin Module (APM)

Snapshot Management

Leveraging StoreVault's Snapshot capabilities, NetVault: Backup's Snapshot Manager Plugin Module allows you to generate, automatically schedule and recover StoreVault filer Snapshots from one single, intuitive GUI. The Snapshot Manager Plugin recognizes Snapshots taken independently of NetVault: Backup's Snapshot Manager Plugin and makes them available for restore. You can also manage previously defined filer Snapshot schedules through the NetVault: Backup GUI.

SAN/NAS Support

NetVault: Backup helps you leverage your investment in today's advanced storage networking technology. Large capacity libraries and high speed tape devices are easily shared within a NetVault: Backup domain. You can share media and libraries between multiple nodes to distribute backup operations while increasing data throughput and reducing network load. NetVault: Backup automatically determines the best data path and handles shared device arbitration.

Policy Based Job Management

Comprehensive job management tools help storage administrators create data protection policies that are used to efficiently define and manage backup strategies for all of your clients and critical applications. The Policy Management tools allow job templates to be created and easily applied to a single client or an entire group of clients, simultaneously. Once defined, policy-based administration allows you to monitor, manage and edit a group of jobs as a single entity. This ultimately improves productivity and reduces the human error associated with manual job management.

User Level Access

To ease storage administration and increase security, the User Level Access feature allows

users to be defined with a specific set of privileges on an individual or group basis. For example, you may grant the ability to run reports and define backup jobs to your Database Administrators, while limiting all other users to restoring only their clients' files. User Level Access helps free network administrators for more critical tasks.

Enhanced Reporting

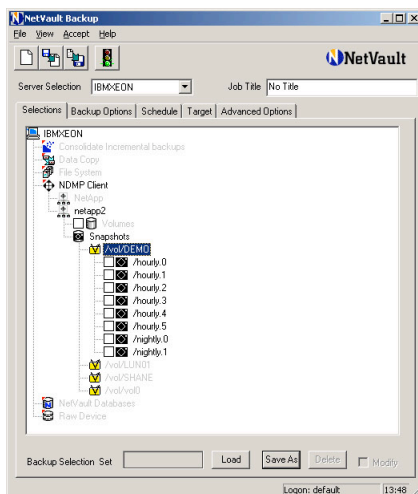

The improved reporting feature enables the administrator to schedule reports with several output types available, such as HTML or Comma Delimited. Reports can be viewed dynamically, printed and/or emailed upon completion. In addition, a powerful report editing tool has been provided to allow user defined reports to be created. Reports can be executed conditionally and/or on a scheduled basis.

Comprehensive Application Support

NetVault: Backup provides a full suite of Application Plugin Modules (APMs) to provide online support for your critical business database and messaging applications. Installed on the client, each APM's interface automatically adds application specific components to your backup and restore selection criteria.

About BakBone

BakBone Software (PK:BKBO) is a leading global data protection provider that develops and distributes data backup, restore, and disaster recovery software for network storage and open-systems environments worldwide. BakBone delivers scalable solutions that address the complex demands of large enterprise environments, as well as small and medium-sized businesses. Founded in 2000, BakBone products are used by Fortune 1000 corporations and domestic and international government entities. Distributed through a select global network of OEM partners, resellers and solution providers, interested companies can find more information about BakBone's products and services at www.bakbone.com or email info@bakbone.com.

From a single management console, NetVault: Backup StoreVault Edition manages StoreVault Snapshots
